Best in Filter Designs

Application of SPICE Models in FilterSolutions®

FilterSolutions has the capability of using vendor supplied or custom designed SPICE models as the basis for filter circuit synthesis and simulation. SPICE models can be automatically selected for each synthesized element. Synthesized filters are automatically updated and simulated with the “best fit” SPICE model for easy viewing.

SPICE models are included in FilterSolutions exports to such circuit simulators as NI-AWR’s Microwave Office® or CST’s Design Studio®.

A screen shot of a 5th order low pass filter, designed with SPICE models for the inductors is shown above
